

Software Engineer

Description:

Principal Duties and Essential Job Functions:

This position supports the development and delivery of custom software applications to a variety of clients. Successful candidate will possess a bachelor's degree in software engineering, computer science, electrical engineering or related discipline. Applicants selected will be subject to a security investigation and will need to meet eligibility requirements for access to classified information; clearance is a plus. Position will be located out of our Ashburn, Virginia office.

Required Qualifications:

- Must have a strong understanding of Linux. Experience with Cent OS, Redhat, and Ubuntu a plus.
- Programming and scripting experience, such as C, C++, Java, ASP and Visual Basic or similar.
- Experience developing applications for the web, specifically with technologies such as JSPs, Servlets, and AJAX. Web and GUI development experience (HTML, XML, CSS, JavaScript).
- Database – SQL Server, Postgres, Mysql, SQL.
- Candidate will work closely with senior engineers and must have a strong desire to work in a team environment.
- Ability to work closely with internal and external customers in analyzing software requirements.

Also a plus:

- Experience with video related technologies and programming, Video CODECS, transcoding and transrating.
- Experience with embedded systems design and development.
- Multicast IP theory and content delivery
- Multi-disciplined and flexible enough to work on software or hardware based solutions.
