

Software Engineer

Principal Duties and Essential Job Functions

TeraLogics, LLC has an immediate opening for a Software Engineer supporting government and commercial customers. Successful candidates will work with multicast content distribution, imagery dissemination, satellite communications, video processing and archiving, and other cutting-edge technologies. Our primary focus is finding candidates with potential who can adapt to a dynamic and demanding small business environment.

Candidates will work closely with senior engineers, should be results-oriented, and must have a strong desire to work in a team environment.

Basic Qualifications

- Degreed engineer with at least 1 year experience; Computer or Electrical Engineering preferred
- Experience in:
 - Programming and scripting, such as C, C++, Java, HTML, ASP and Visual Basic
 - Creating network documentation using Microsoft Visio
 - Developing applications for the Web, specifically with technologies such as JSPs, Servlets, and AJAX
 - Web and GUI development: HTML, CSS, JavaScript
- Multi-disciplined and flexible enough to work on hardware- or software-based solutions
- Able to develop network architecture and perform detailed engineering reviews of design and deployment plans
- Strong team player, able to work as part of a development team – or to work independently
- Detail oriented

Qualifications considered “Plusses”

- Multicast IP theory and content delivery understanding – a strong “plus”
- Solid knowledge of the OSI model and/or satellite communications principles
- Experience with MS SQL Server and XML
- Experience working with DoD DISA STIGs and DoD information assurance principles
- DoD clearances
